eBanf: Software for digital purchase requisitions

In today's business world, it is more important than ever for companies to organise their business processes efficiently in order to remain competitive. The procurement process in particular offers scope for efficiency gains, starting with the purchase requisition.

With eBanf from dataglobal Group, you receive a software solution that has been specially developed for the requisition process.

More efficiency with eBanf in procurement

The purchase requisition process is not yet digitalised in many companies, resulting in un-coordinated processes, long processing times and a lack of cost transparency. With eBANF, you can take a decisive step towards digitising the purchasing process in your purchasing department. You reduce the workload and significantly increase efficiency - also in the subsequent steps of the procurement process.

Arguments for the digital requirement request

- **Fast search and archiving**
  Thanks to eBANF, paper-based requirement notifications are no longer necessary, which saves you the time-consuming search for documents and manual archiving after a process has been completed. Searching for and displaying requisitions is done with just a few clicks.

- **Digital workflows**
  Digital workflows ensure efficient processing of requisitions. Individual work steps are no longer carried out manually, but automated. This speeds up processes and reduces the susceptibility to errors.

- **More transparency**
  Everyone involved in the process can view the status of the purchase requisition at any time.

Ihre Vorteile

- Digital instead of paper chaos
- Accelerated processes in purchasing
- Automated workflows for efficient processing
- Relief for your employees
- Error reduction
- Mobile access, at any time and from anywhere
- Full transparency for all parties involved at all times
- Audit-proof archiving of your requirement notifications

- ## Mobile utilisation option

  Requirement notifications can also be processed from mobile devices such as smartphones or tablets to enable location-independent working.

- ## Ensuring compliance

  You receive support in adhering to internal guidelines and legal requirements, making it easier for you to ensure compliance.

Recorder
Demand is recorded
Document is created

Manager
Automatic assignment
Notification of requirements Check
rejected   approved

Procurement team
File creation (PDF, CSV, database entry, XML)
Transfer of the file to interfaces

Inform about status

- ## All forms and functions include

  Requirement notifications can also be processed from mobile devices such as smartphones or tablets in order to enable location-independent working.

- ## Adaptability and assistance from smart robots

  The eBANF solution offers you many possibilities for optional customisations. This helps you to perfectly customise the process to your requirements. The following components can be configured:
  - Optional process steps (request for quotation, budget entry, additional approval)
  - Automatic approval control
  - Contents of e-mail texts
  - File storage in the document management system

  The practical Smart Robots are included in the scope of delivery to help you with customisation. With their help, you can quickly and independently model the desired components without in-depth programming knowledge.
