

eXpurgate.Cloud

Stop spam emails, phishing & ransomware attacks efficiently

When it comes to the security of your email communication, you shouldn't compromise. With eXpurgate.Cloud, you can reliably protect your sensitive data from spam & malware as well as advanced phishing & ransomware attacks. Stop these threats in the shortest possible time. Our unique detection and response capability enables emails to be delivered quickly and securely.

Trusted protection for your email infrastructure

Spam, phishing and malware pose a daily threat to companies. Because as the number one means of communication for business correspondence, emails are still the most popular target for cyber criminals. Reliable protection of your email communication is therefore essential.

With eXpurgate.Cloud, the dataglobal Group offers an email security solution that, with a spam detection rate of over 99.99% and a detection rate of 1 billion (!) emails per day, provides a level of security for companies that is almost unrivalled.

Intelligence Hub

All data and information collected by eXpurgate is centralised in the Intelligence Hub. The data is enriched, continuously analysed in real time and evaluated accordingly. Benefit from the data and insights gained from global email traffic. Thanks to the Intelligence Hub, eXpurgate guarantees unrivalled recognition performance.

dataglobal Group – Software solutions for the digital workplace – Made in Germany

What drives us as dataglobal Group is the vision of a working world in which people can work easily and mobile from anywhere in the world – securely, conveniently and with the tools and functions they need for their own peak performance on the job. Although we provide the technical innovation, in the end you do the work that matters.

We support you in optimising the processes in your company both economically and in terms of ecologically sustainable corporate management. In this way, together we can master the challenges of a modern working world that is characterised by rapid change and the breaking down of outdated ways of thinking, presenting its players with new tasks.
